Sign in and check the Admin Console

This pack is for the SFE and CRM team. It shows what is in the Zeta Pharma org today, how to sign in, and which screens to open. Screenshots were taken on 15 October 2026 in Field Co-pilot.

How to sign in

Open **https://zetapharma.my.salesforce.com**. The username is the business email. The password is the first word of the English name, letters only, followed by **@2026!**. Example: Mayar Ashraf Mohamed Ibrahim signs in as mayar.ashraf@zeta-pharma.com with Mayar@2026!.

After sign-in, open the app launcher and choose **Field Co-pilot**. Click **Admin Console**. The six SFE and CRM people below already have System Administrator access, so the console opens for them.

Name	Title	Username	Password
Ahmed Abdullah ElShahat	SFE Manager	ahmed.abdullah@zeta-pharma.com	Ahmed@2026!
Ahmed Mohamed Hamid	Business Excellence Manager	ahmed.hamid@zeta-pharma.com	Ahmed@2026!
Aya Adel Abdelwahab	Senior Analyst CRM	aya.adel@zeta-pharma.com	Aya@2026!
David Ayman Badie	CRM & SFE Specialist	david.badie@zeta-pharma.com	David@2026!
Hamsa DiaaElDin Sayed	CRM & SFE Specialist	hamsa.diaaeldin@zeta-pharma.com	Hamsa@2026!
Manar Saleh Aly	CRM Specialist	manar.saleh@zeta-pharma.com	Manar@2026!

Every other commercial employee uses the same rule. Username is the business email. New field users are Standard User, so they can sign in and confirm the password, and they do not see this console until a field permission set is assigned.

What was loaded on 15 October

The commercial employee file was loaded into Salesforce. 772 people are active. Welcome email was not sent. 663 have the direct manager from the sheet. 39 rows have no manager code. 70 rows point at a manager code that is not in this file, so those manager links are still open. People who already had a Salesforce login kept their existing profile.

A spot check: Mayar Ashraf, mayar.ashraf@zeta-pharma.com, title Act as Field Force Supervisor, manager Mohamed Shaaban Mohamed Elsafty, profile Standard User, status Active.

June 2026 distributor withdrawals were already in the org before this user load: 120,905 rows, about 1.32 million units, tied to 28,958 pharmacies and 90 products. Sources are IbnSina, POS, Elezaby, Egydrug, Sofico, and a thin Direct set of 460 rows. The brick on every row is blank.

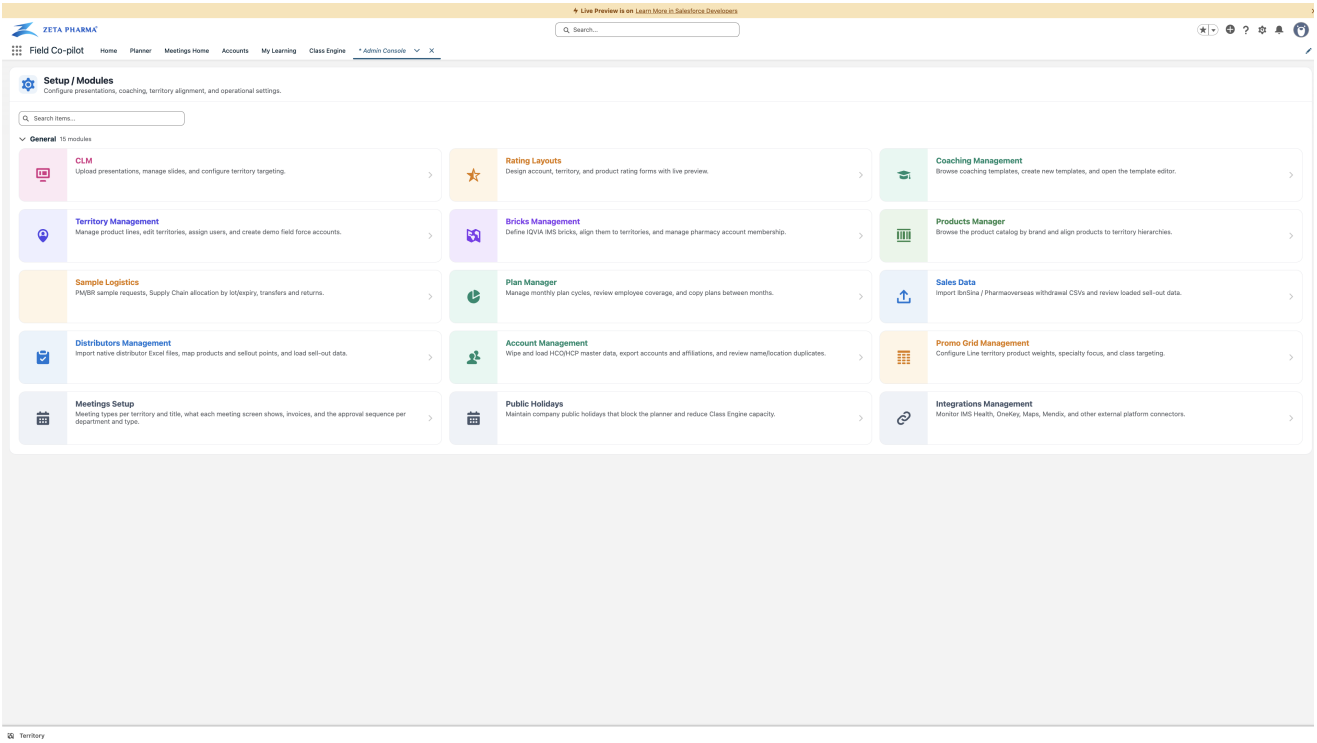

What to try in the Admin Console

The console has 15 modules. Use them to look and confirm. Do not run a wipe in Account Management. Sales Data can show the June withdrawals. Territory contribution, ceilings, chain shares, the bulk split, and original and buffer targets have not been calculated from those rows.

1. Territory Management, Users tab. Search your own name, then search mayar.ashraf. Confirm Active, title, email, and manager.
2. Territory Management, Product Lines. Confirm CHC, DIAB-I through DIAB-IV, GIT-I through GIT-III, PEDIA, ORTHO, CVM, DERMA, and NEUROSCIENCE are present.
3. Meetings Setup. Confirm the meeting types, who can create them, and the approval sequence. Reps still create meetings from this setup. The request-only change is not live yet.
4. Sales Data. Open June 2026 and confirm IbnSina, POS, Elezaby, Egydrug, and Sofico rows. Do not upload the same files again.
5. Products Manager and Bricks Management. Browse. Product and brick alignment for the new users is not part of this load.

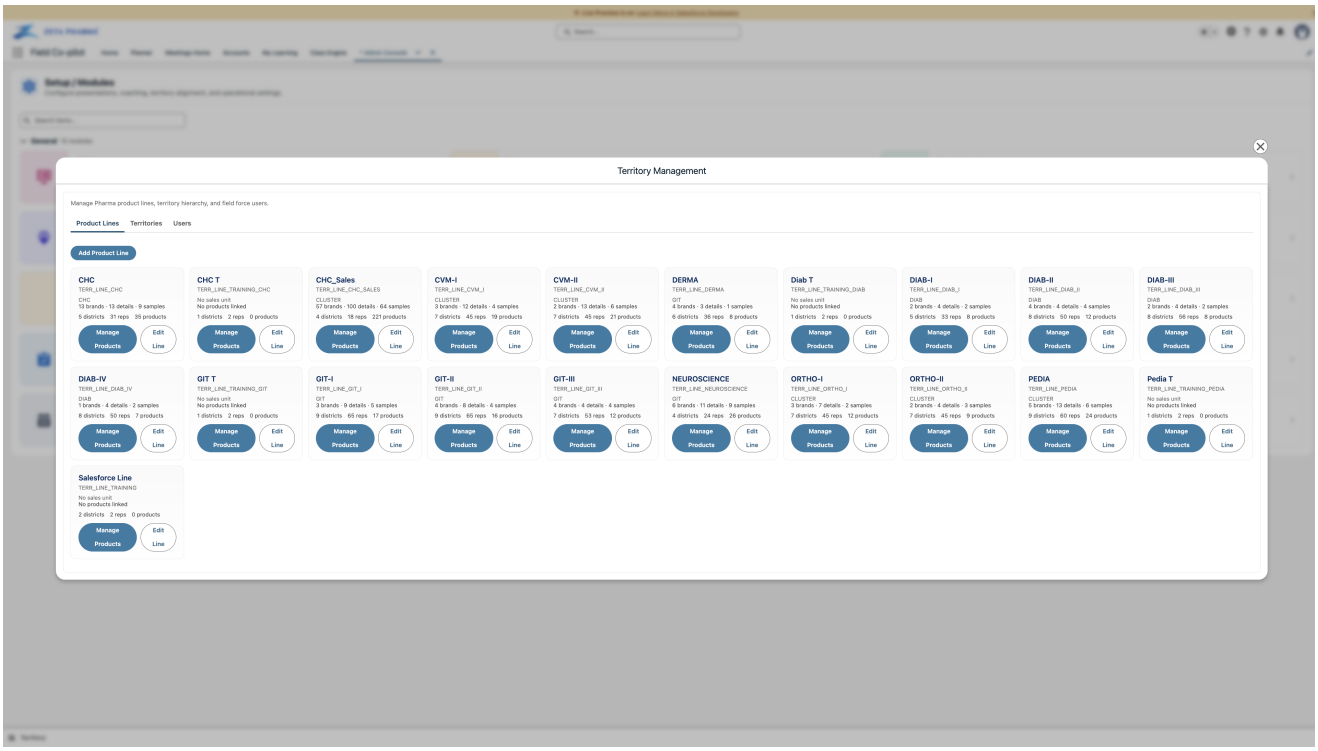

Screens from the org

Admin Console home

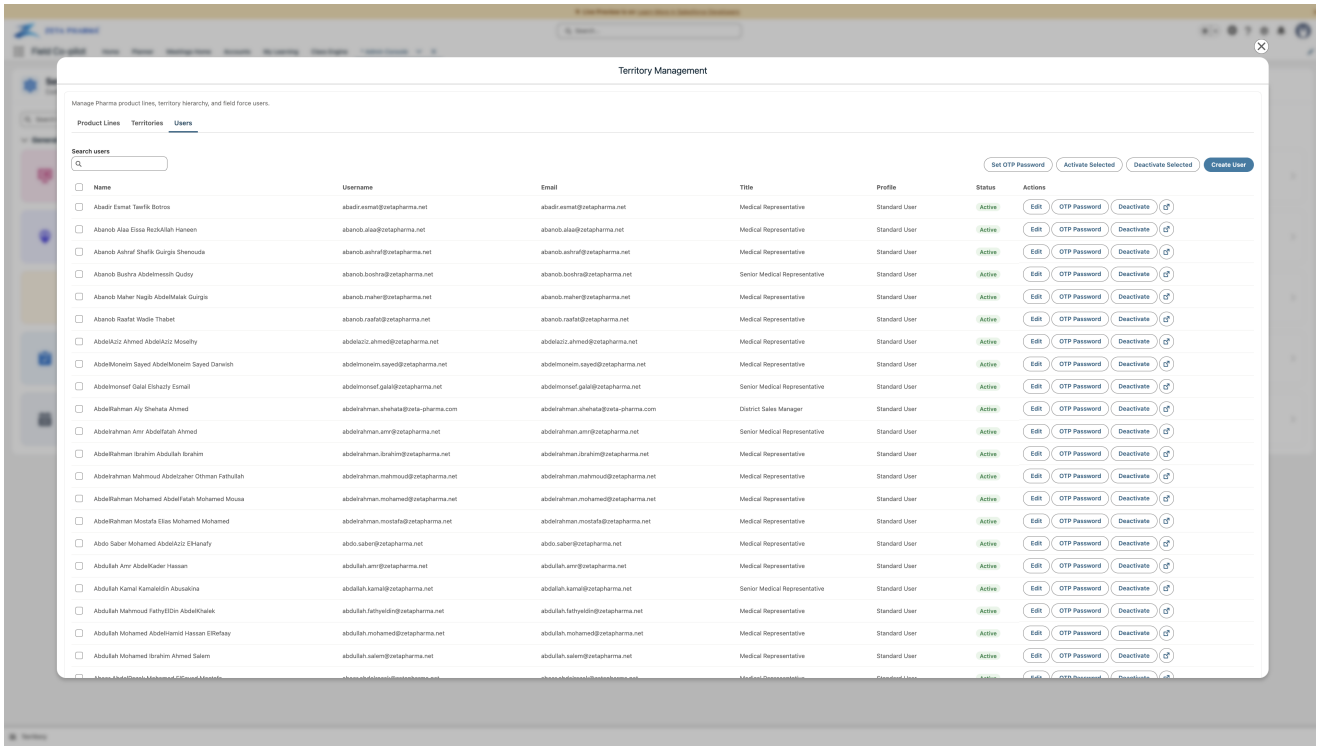

Field Co-pilot, Admin Console. Fifteen modules. This is the first screen after sign-in for an administrator.

Territory Management, product lines

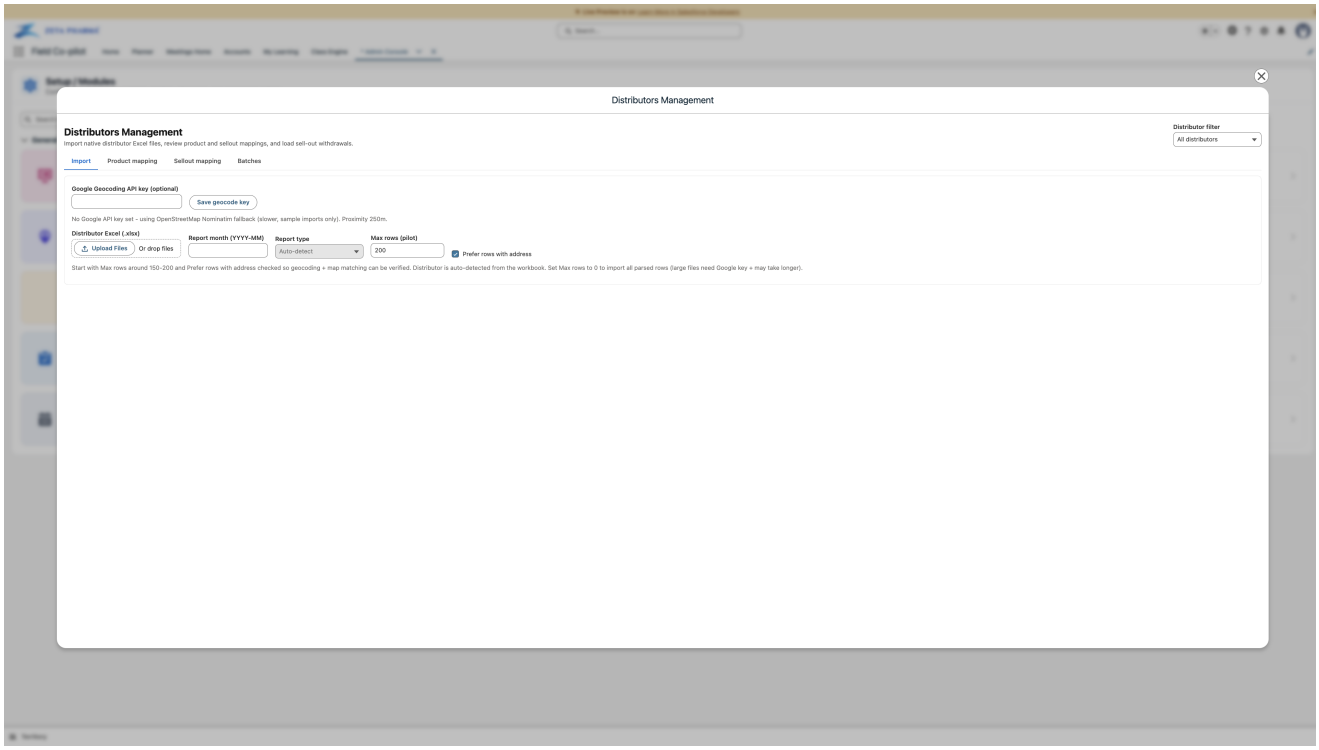

Product lines already in the org, with brand, detail, sample, and product counts on each card.

Territory Management, users

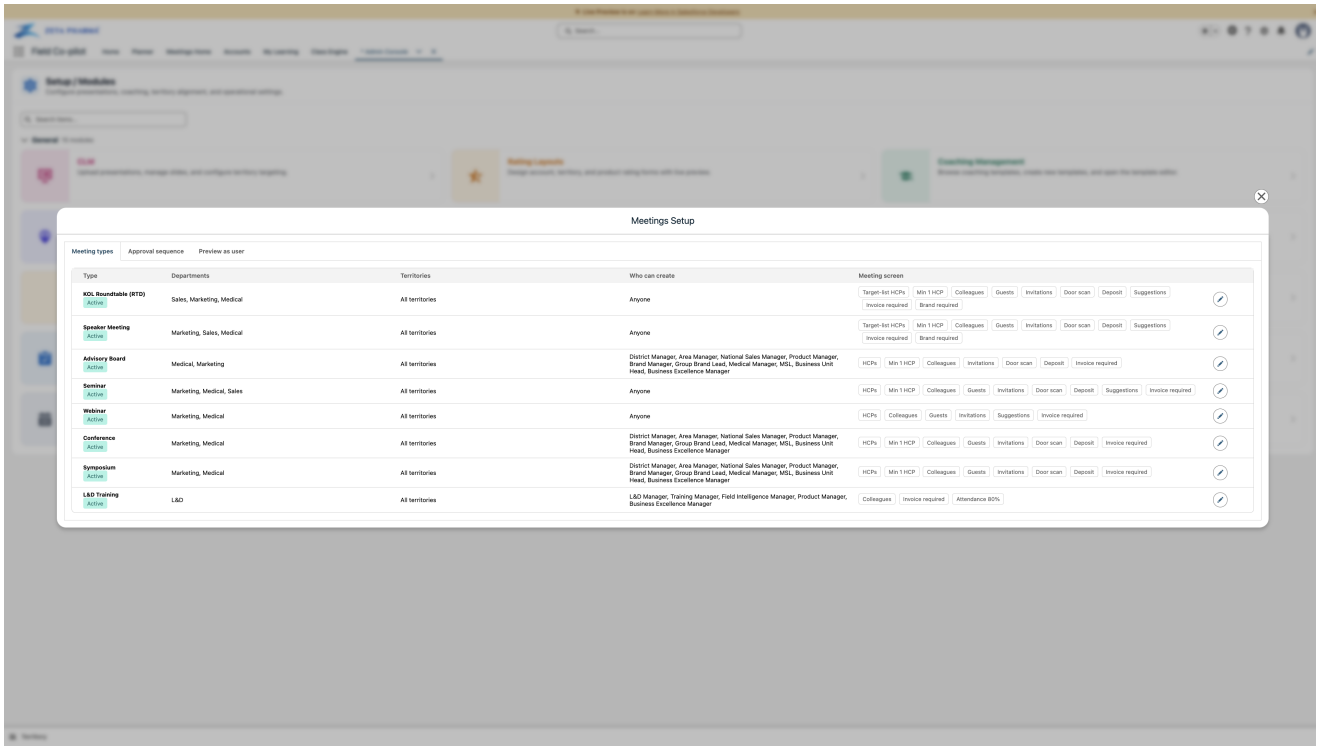

Commercial employees as loaded. Status Active, profile Standard User, username equal to the business email. Search from the box at the top left.

Distributors Management

Import screen for a new distributor Excel. June withdrawals are already stored. This screen is for the next file, with Max rows still at 200.

Meetings Setup

Meeting types live in the console: KOL Roundtable, Speaker Meeting, Advisory Board, Seminar, Webinar, Conference, Symposium, and L&D Training.

Still to come, so do not mark these as done

- Territory sales contribution, chain brick shares, ceilings, and the bulk split. The June rows are loaded; they are not digested.
- Original and buffer targets per position and item.
- Assigning each new user to an organogram position.
- CLM decks aligned to products and territories. One presentation is in the org today.
- A real classification and physician-movement history. The APM numbers in the org today are a demo seed: penetration is filled, sales volume is filled on 1,952 rows across 226 accounts, and classification is about 1,520 rows split almost evenly across A1 to C3. Rating snapshots repeat 12,708 accounts across 12 months and do not store a class.

Please send back

A short note is enough: which login worked, which user record looked wrong, and which console module did not open. June withdrawal totals can be checked. Do not treat APM, classification, or territory contribution as finished. Do not deactivate users or wipe accounts during this pass.
